

SMARTEN™ Controls

Putting the Wellsite at Your Fingertips

The SMARTEN™ Controls Asset Manager is the industry's first automated wellsite management system that delivers maximum performance and optimize production for your rod pumped wells. SMARTEN provides a versatile, programmable platform, customizable to your unique pumping environment. Featuring an easy-to-use interface, it provides remote, real-time diagnostics and alerts, allowing you to focus your energy where and when it is needed most.

Advanced Diagnostics. Enhanced Visibility. Better Performance.

- Leverage the power of XSPOC diagnostics, pattern matching from our database of over 6.25M DH cards with real-time Dynagraph cards
- Natural language diagnostics for expert analysis at a glance from our proprietary XSPOC diagnostics engine
- Access and make operational changes to the well anytime, anywhere with SMARTEN Go Live
- Wi-Fi connectivity allows for local access without leaving the safety of your vehicle

SMARTEN™ Controls Asset Manager, the industry leader in rod pumping optimization and design software.

Simple Installation. Simple Setup. Simple Operation.

- Simple unit setup with one screen to establish operating parameters
- Integrate with existing or newly-installed load and position equipment
- Simple upgrade process via onsite or remote connection

All of the Benefits of Industry Standard Pump Off Control

- Advanced pump off and VSD control for autonomous adjustments to continuously changing well conditions
- Customizable I/O logic functions automate next steps for handling critical field conditions
- Storage for 180-day operational history
- Use on conventional and mechanical long stroke pumping units with 6 speed zones to increase system life
- DH card generated on every stroke offering continuous automated analysis of well conditions and control
